

AMENDMENTS TO THE SPECIFICATION

Please amend the Specification within lines 18-27 of page 7 as reflected below:

Referring now to FIG. 5, there is illustrated a window 500 showing an integrated and cascading menu feature 506 of the present invention. Integration of the hosted application (also known as a server application) with the IDS can result in conflicts between similarly named menu items. Here, integration of the IDE and the hosted application causes a menu conflict such that tat least the View menu items are in conflict. The IDS modifies its existing View menu 502 include the hosted application menu ~~[[504]]~~505 (assessable through and notated as Sever View Commands). The IDS presents to the user text that clearly identifies the location of the server View menu options within the IDE View menu 502. An expansion arrow associated with the Sever View Commands menu option facilitates accessing the cascaded server submenu items.
